Job description

Business Intelligence Analyst

We are looking for a BI Analyst to join the Mitigram team in their ambitious endeavour to shape the future of financing global trade.

As a BI analyst at Mitigram you will continuously deliver insights to some of the world's leading financial institutions and corporations, as well as to the internal Mitigram teams. The role is also an opportunity to influence and contribute to Mitigram' s advanced analytics roadmap from descriptive analytics to actionable insights for a truly data-driven organisation and customer base.

Responsibilities
- Work with senior management, product, and customer managers to enable data driven decision making.
- Develop data lake and data warehouse infrastructure together with data engineers
- Create and maintain dashboards and reports for customers and internal teams
- Develop and maintain analytics tools in SQL server, Power BI, Metabase and Splunk
- Ad hoc analysis for key customers and business cases

Required skills and experience:
- 2-3 years' experience as a data analyst, BI specialist or similar
- Master's Degree in Computer Science, Mathematics, Engineering or a related technical field
- Experience in using data visualization products and technologies, such as Power BI, Tableau, or Looker
- Proficiency with relational databases such as SQL Server, Postgres, or MySQL
- Experience in using statistical and scripting languages such as Python, R, SAS, or MATLAB

Meriting experience:
- Experience with DAX and PowerQuery
- Proficiency with Excel
- Data modelling know-how for analytics as well as machine learning
- Experience with diverse data types
