Job description

miti

QA Automation Engineer

We are looking for a QA Automation Engineer to join our team on our ambitious and exciting journey to digitize and shape the future of financing global trade.

In the role, based in Stockholm, you are responsible for developing, implementing and ensuring automation testing practises. You utilize your in-depth knowledge of testing technologies to develop the test framework to help building and maintaining automation set up.

To be successful in this role you can rapidly understand complex business concepts, workflows and involved risks in order to determine the required QA measures and testing approach.

You are highly driven, self-motivated person that is a team-player and keen to learn and implement latest tools and technology. You are fun-loving, eager to learn, and you like to take responsibility for your own work as well as the company´s effort.

Requirements:

• Bachelor´s degree in computer science, system analysis or a related study

• 5+ years extensive hands-on experience in developing test automation frameworks

• Experience of Automation Test tooling and process – such as Puppeteer, Typescript/JavaScript, Jest

• Experience in any programming language

• Experience in GIT and Docker

• Working knowledge of test management software and experience of configuring and supporting CI/CD pipeline

• Ability to identify problems and drive improvements

• Review automated feature testing and identify risks and gaps in coverage
