## Front End Software Engineer

Mitigram is one of the most exciting Fintech companies in the Nordics. Strong growth, among the world's largest corporates and banks as our clients, and leading investors ensure we have a lot of exciting challenges and opportunities for anyone that joins at this stage.

Mitigram has developed a world-leading online marketplace built for the Trade Finance community. Our product is recognized by thousands of individuals from Montevideo to Shanghai. We are the fastest growing Trade Finance network in the market, and we are looking for someone to help us drive our growth.

Trade Finance itself is the part of banking that supports trillions of dollars' worth of trade every year, facilitating business between buyers and sellers across the globe. Without Trade Finance the world would literally stand still.

The Mitigram team is highly diverse with members from 15+ countries from leading institutions in trade, investment, risk management, software, security and compliance.

### We are looking for

A Front End Software Engineer who likes to work in a flat-structured, highly dynamic, friendly and fun environment.

The role, based in Stockholm, involves close collaboration with the product management team and backend engineers. As a Front End Software Engineer, you will create and further enhance user experience by providing a simple, robust and intuitive UI. We use short sprints and agile practices where time from idea to market is minimized, while keeping a high product quality. You will primarily work on the existing codebase while at the same time modernize the front-end of our application into Angular. You will be an integral part of our development team, working with and taking shared responsibility for the user interface of our services.

To be successful in this role you must have knowledge in domain- and test-driven development and are able to quickly translate product requirements into stable code. You have opinions, you like to take responsibility for and influence your own work as well as the company's effort as a whole. You are a fun-loving and hardworking individual who is always eager to learn and loves sharing knowledge and experience.

## You should have

- Commercial experience as a front end engineer developing complex web applications
- Great experience with JavaScript and preferably TypeScript and appreciate its advantages
- Great knowledge of ES6 and beyond
- Proficiency in writing clean vanilla JavaScript code as well as using libraries and frameworks like jQuery, Angular, Vue, React and/or Svelte
- Knowledge of CSS is highly important and very beneficial if you have experience with LESS and SASS
- Solid foundation creating cross-browser and responsive web experiences and understand the nuances of supporting tablet and mobile browsers
- Experience with JavaScript testing, Good appreciation for TDD
- Experience creating and consuming APIs and RESTful web services
- In-depth knowledge of the Kendo UI framework is great
- Knowledge of Node, Redux, RxJS, webpack, React Native and native app development is a big plus
- For our backend use the latest Microsoft web stack, so strong object-oriented fundamentals with prior experience in ASP.NET MVC and C# is a big advantage
- Experience with Docker and Kubernetes
- Experience working in an agile environment

## You should be

- Familiar with various design and architectural patterns
- Able to quickly adapt and learn
- Able to troubleshoot and debug complex issues such as network latency, front end performance, cross-browser bugs
- Self-driven and work with minimal supervision
- Excellent communicator in written and spoken English
