

MITIGRAM

Technical Test Specialist

Mitigram is one of the most exciting Fintech companies in the Nordics. Strong growth, among the world's largest corporates and banks as our clients, and leading investors ensure we have a lot of exciting challenges and opportunities for anyone that joins at this stage.

Mitigram has developed a world-leading online marketplace built for the Trade Finance community. Our product is recognized by thousands of individuals from Montevideo to Shanghai. We are the fastest growing Trade Finance network in the market, and we are looking for someone to help us drive our growth.

Trade Finance itself is the part of banking that supports trillions of dollars' worth of trade every year, facilitating business between buyers and sellers across the globe. Without Trade Finance the world would literally stand still.

The Mitigram team is highly diverse with members from 15+ countries from leading institutions in trade, investment, risk management, software, security and compliance.

We are looking for

A Technical Test Specialist to join our team on our ambitious and exciting journey to digitize and shape the future of financing global trade.

The role, based in Stockholm, requires collaboration with development, product management and DevOps. As a Technical Test Specialist, you are responsible for developing, implementing and ensuring testing practices and automation. You utilize your in-dept knowledge of testing technologies and best practises to recommend and inspire teams throughout the organization on producing and releasing quality applications and services.

To be successful in the role you can rapidly understand complex business concepts, workflows and involved risks in order to determine the required QA measures and testing approach. You are a highly driven, self-motivated individual, that is a true team player who has the achievements of the team at heart and prides their deliveries. You are fun-loving, eager to learn, and you like to take responsibility for your own work as well as the company's effort.

MITIGRAM

What you'll do

- Hands-on design and development of highly scalable, robust and maintainable automated test solutions
- Identify, implement and coach team members on software testing technologies and best practices
